Under the authority of the *Pest Control Products Act*, Health Canada's Pest Management Regulatory Agency (PMRA) has added new uses on garden beets to the product label of Upbeet Herbicide Dry Flowable 50%, containing technical grade triflusulfuron-methyl. The specific uses approved in Canada are detailed on the label of Upbeet Herbicide Dry Flowable 50%, *Pest Control Products Act* Registration Number 25813.

Corresponding maximum residue limits (MRLs) were proposed in the consultation document published on 23 June 2011, Proposed Maximum Residue Limit PMRL2011-21, *Triflusulfuron methyl*. The PMRA received no comments in response to this consultation.

To comply with Canada's international trade obligations, consultation on the proposed MRLs was also conducted internationally by notifying the World Trade Organization, as coordinated by the Standards Council of Canada. No comments were received as a result of the World Trade Organization consultation.

The following MRLs take legal effect in Canada as of the publication date of this document and are in addition to the MRLs already established for triflusulfuron-methyl.

Established Maximum Residue Limits for Triflusulfuron-Methyl

Common Name	Residue Definition[1]	MRL (ppm)	Food Commodity
Triflusulfuron-Methyl	methyl 2-[[[[[4-(dimethylamino)-6-(2,2,2-trifluoroethoxy)-1,3,5-triazin-2-yl]amino] carbonyl]amino]sulfonyl]-3-methylbenzoate	0.01	Garden beet roots, garden beet tops

A complete list of all pesticide MRLs established in Canada can be found on the Maximum Residue Limits for Pesticides webpage in the Pesticides and Pest Management section of Health Canada's website.

[1] The residue definition for triflusulfuron-methyl was previously established as "methyl 2-[4-dimethylamino-6-(2,2,2-trifluoroethoxy)-1,3,5-triazin-2-ylcarbamoylsulfamoyl]-*m*-toluate" but has been revised in accordance with Table 1 to reflect Chemical Abstracts Service (CAS) terminology.
